

Multi-day temp/r.h. plots, Q1 & Q2, H-123

Temperature logger readings, 10 m intervals

Queue2 in H123

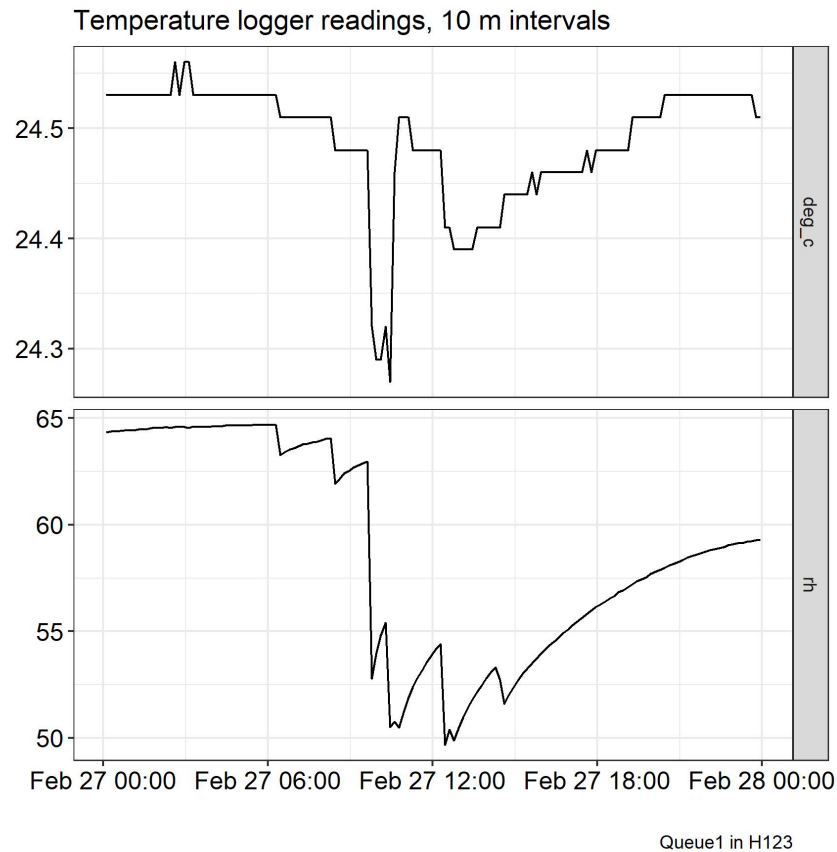

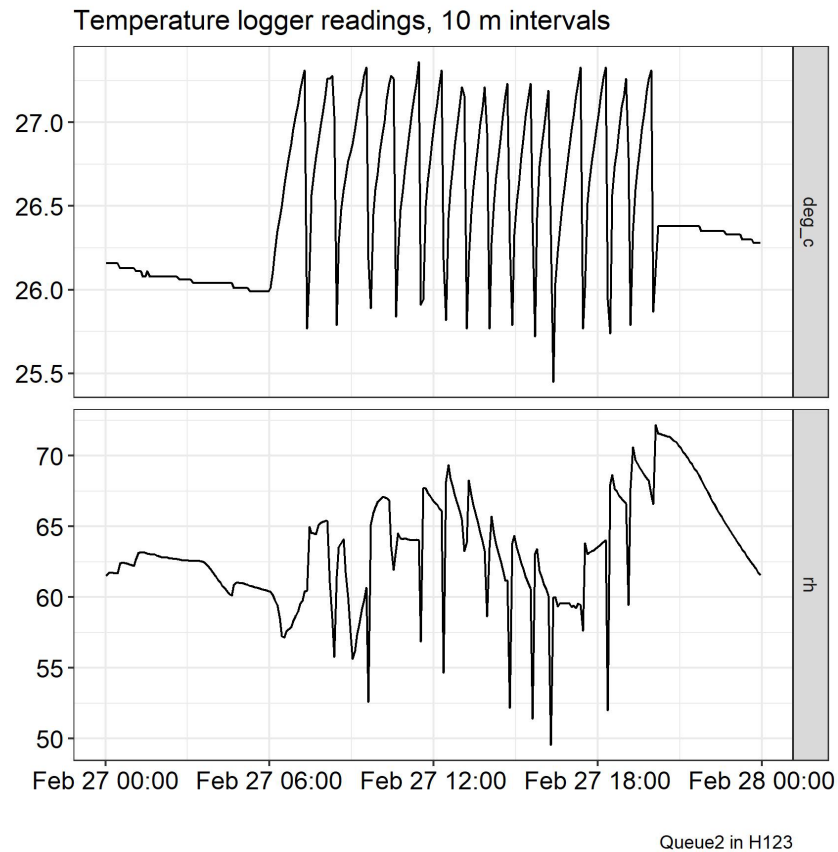

Temperature logger readings, 10 m intervals

Queue1 in H123

Queue 2 (south, first unit done) fluctuates within acceptable tolerance. Queue 2 has less fluctuation, but drifts and is outside acceptable tolerance with respect to the 26C target temperature.

One day temp/r.h. plots, Q1 & Q2, H-123

The temperature profile for Queue 2 is consistent with the idea that heating from the lights causes some fluctuation. There is no evidence of this for Queue 1.
